Yas Marina — Corner Performance Summary

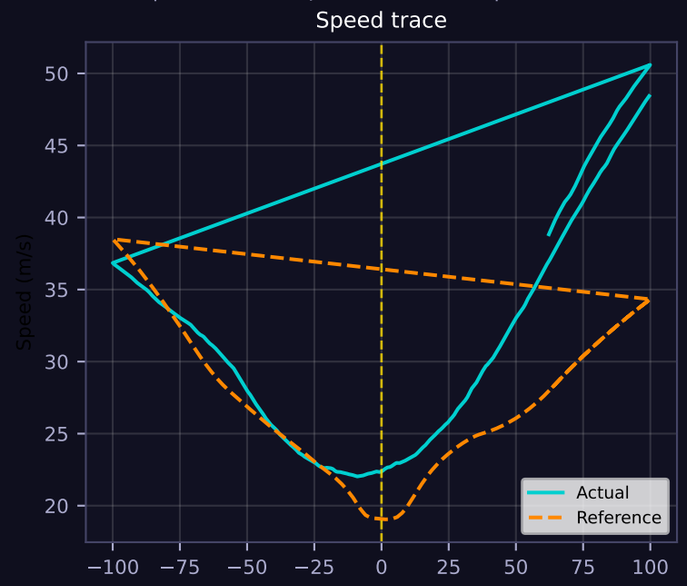
Bag: hackathon_good_lap.mcap | Raceline: minimum curvature | 4 corners analysed

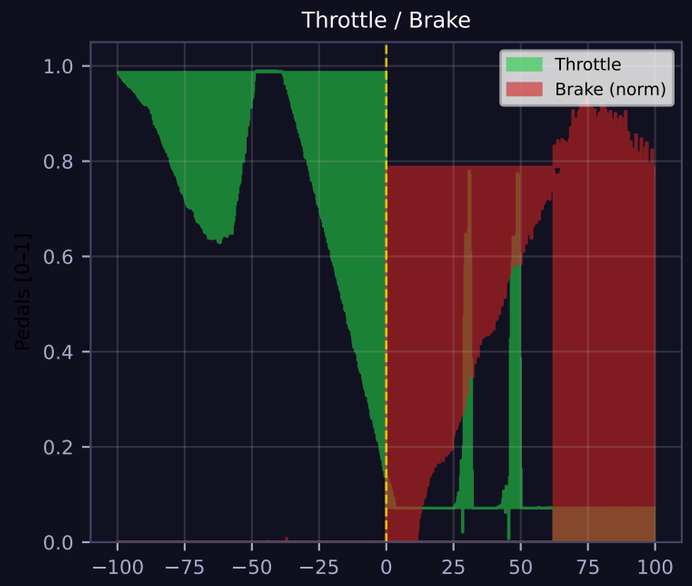
Corner	Radius	Ref Spd at apex	Entry speed	Apex speed	Exit speed	Apex lat dev (m)	Apex lag (m)	Early throttle	Issues
	31 m	19.1 m/s	102%	114%	122%	+0.10	+35	✗ Yes	Late apex; Early throttle
	20 m	15.3 m/s	123%	170%	125%	+1.27	+4	✗ Yes	Under-braking / hot entry; Early throttle
	13 m	12.8 m/s	108%	96%	116%	+0.68	+30	✗ Yes	Under-braking / hot entry; Late apex; Early throttl
	21 m	16.1 m/s	94%	95%	105%	+0.02	-68	✗ Yes	Early apex; Early throttle

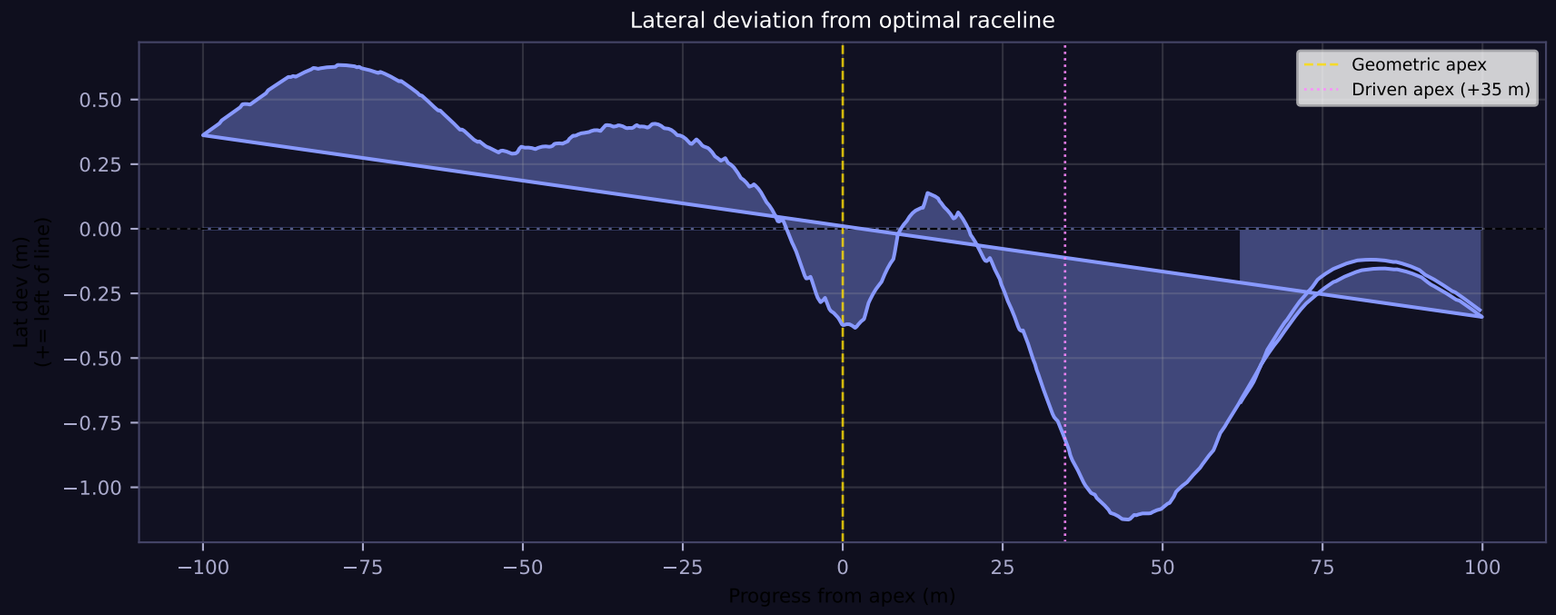
■ Green = within reference ■ Amber = 1 issue ■ Red = significant deviation

C1 (R, R=31m, 19.1m/s)

Apex at s = 379 m | Reference speed: 19.1 m/s | Window: [279, 479] m







Corner analysis

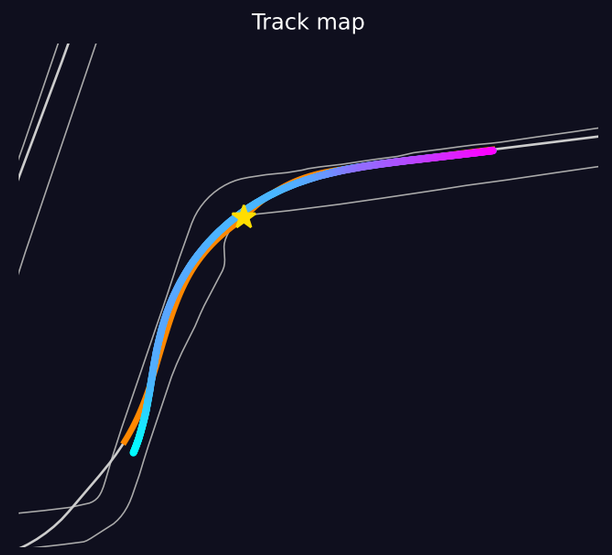
```
Entry speed:  102.3%
Apex speed:   114.1%
Exit speed:   121.6%

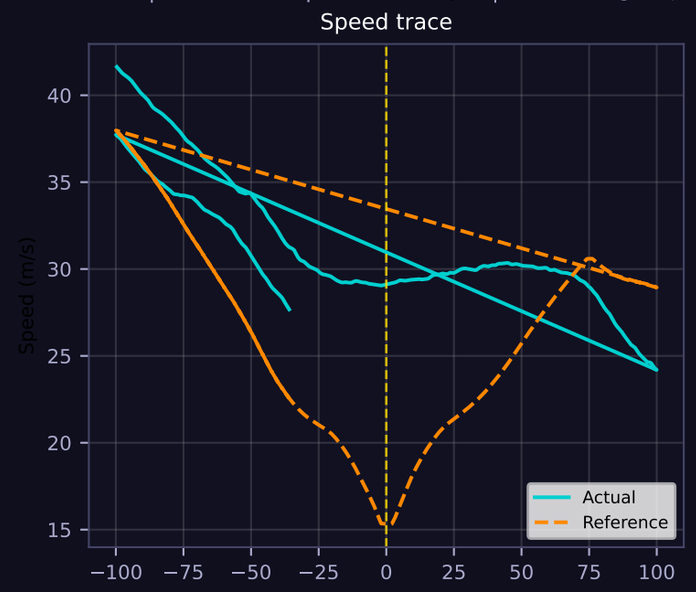
Apex lat dev: +0.10 m
Apex lag:     +34.8 m
Brake start:  +12 m from apex
Throttle app: +28 m from apex

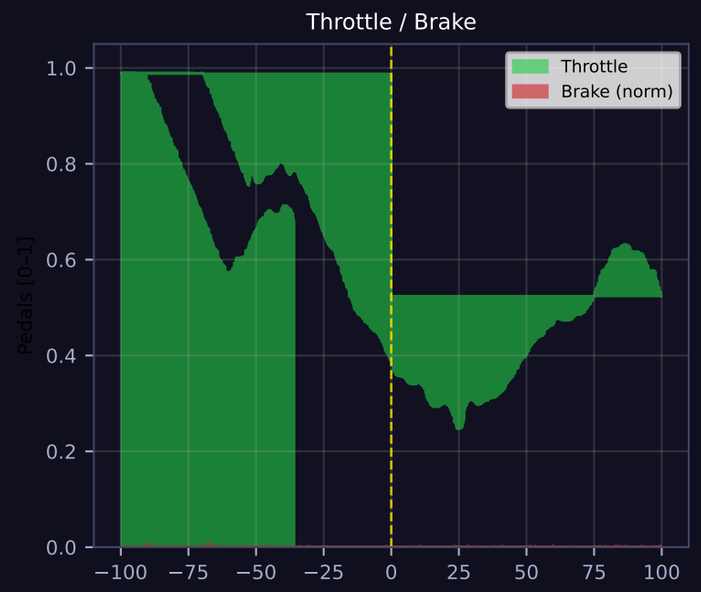
⚠ Issues detected:
  • Late apex
    Driven apex 35 m past geometric apex
  • Early throttle
    Throttle applied before apex — risk of understeer on exit
```

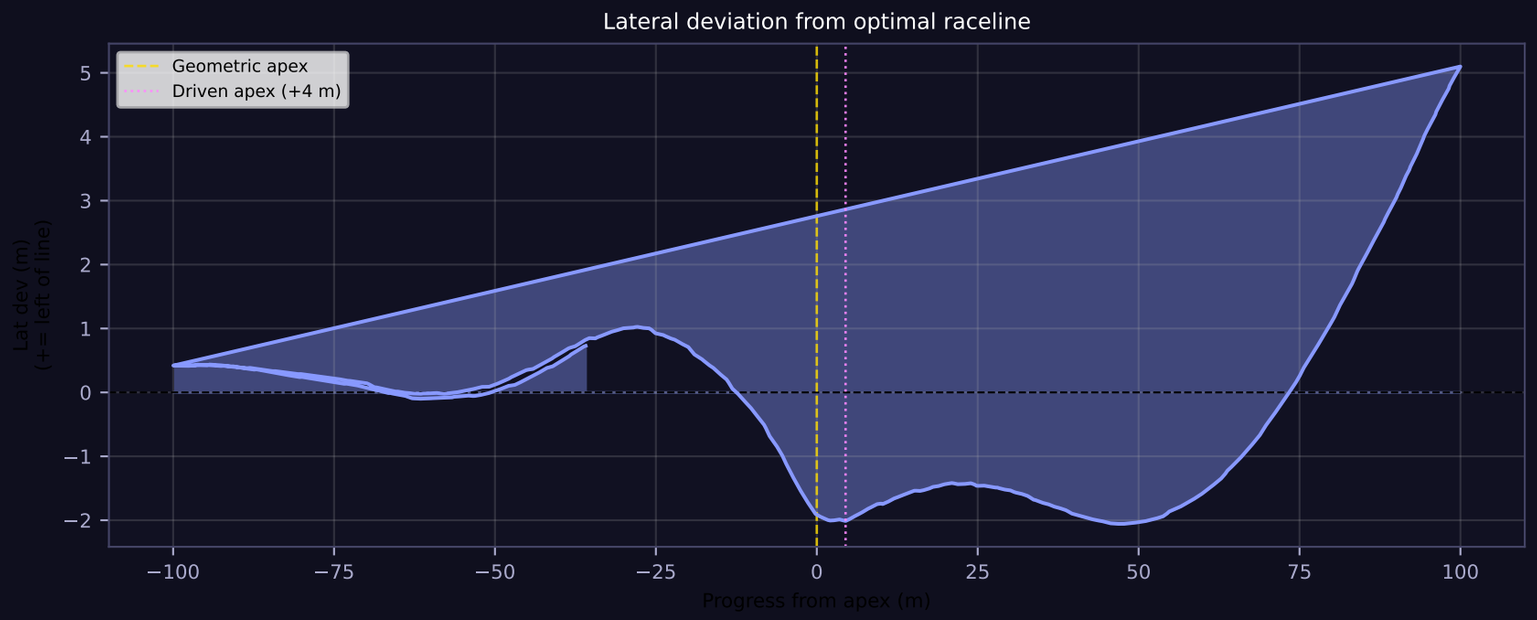
C2 (R, R=20m, 15.3m/s)

Apex at s = 931 m | Reference speed: 15.3 m/s | Window: [831, 1031] m









Corner analysis

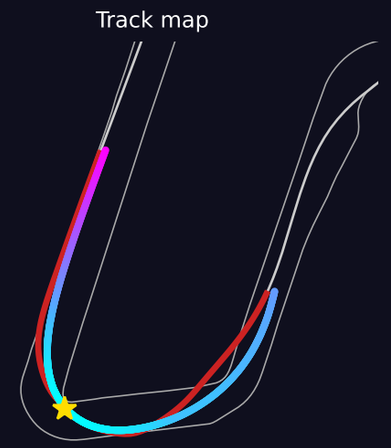
```
Entry speed:  122.7%
Apex speed:   170.0%
Exit speed:   124.6%

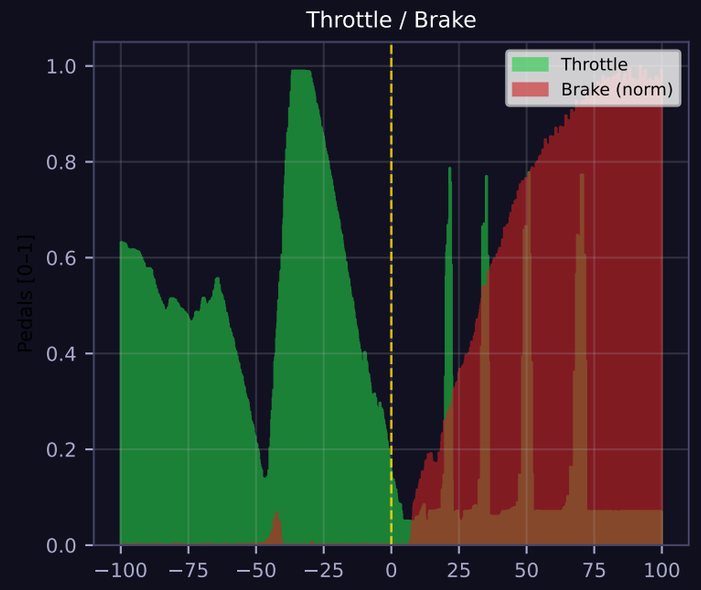
Apex lat dev: +1.27 m
Apex lag:     +4.5 m
Brake start: —
Throttle app: +0 m from apex

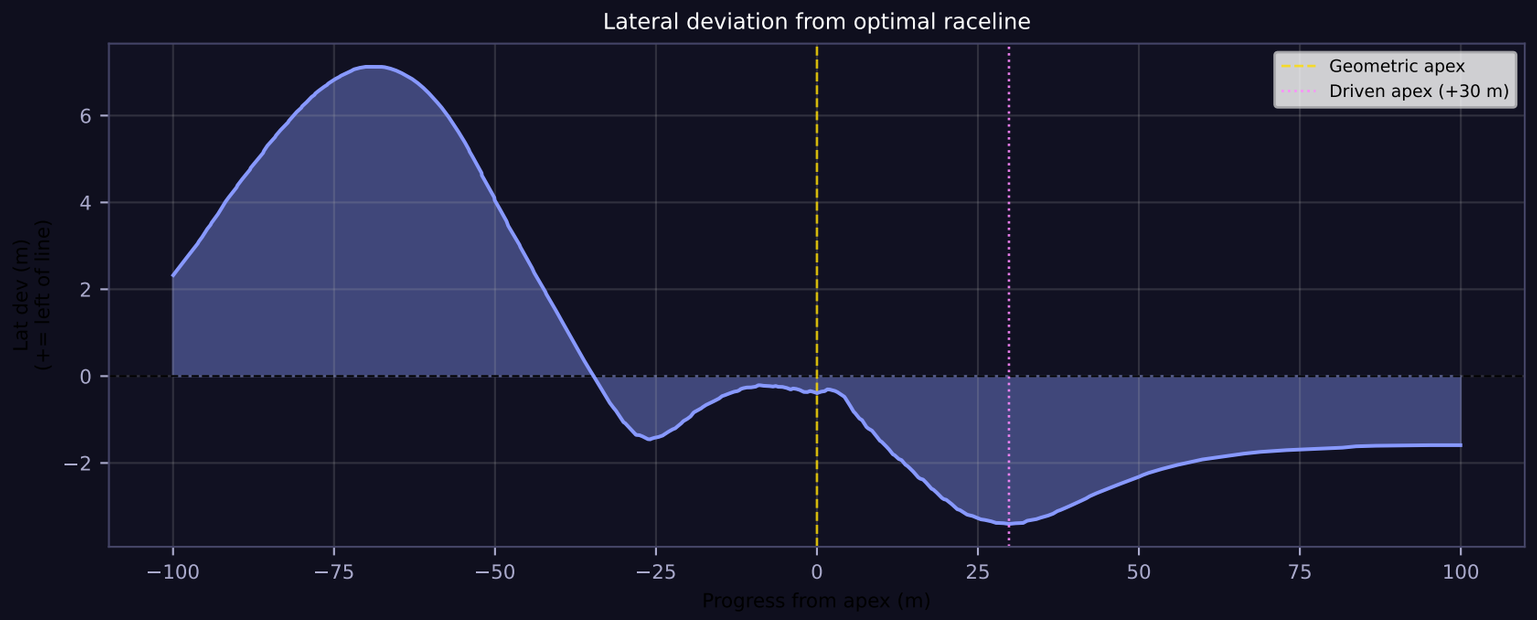
⚠ Issues detected:
  • Under-braking / hot entry
    Entry speed 123% of reference (+23%)
  • Early throttle
    Throttle applied before apex — risk of understeer on exit
```

C3 (R, R=13m, 12.8m/s)

Apex at s = 1117 m | Reference speed: 12.8 m/s | Window: [1017, 1217] m







Corner analysis

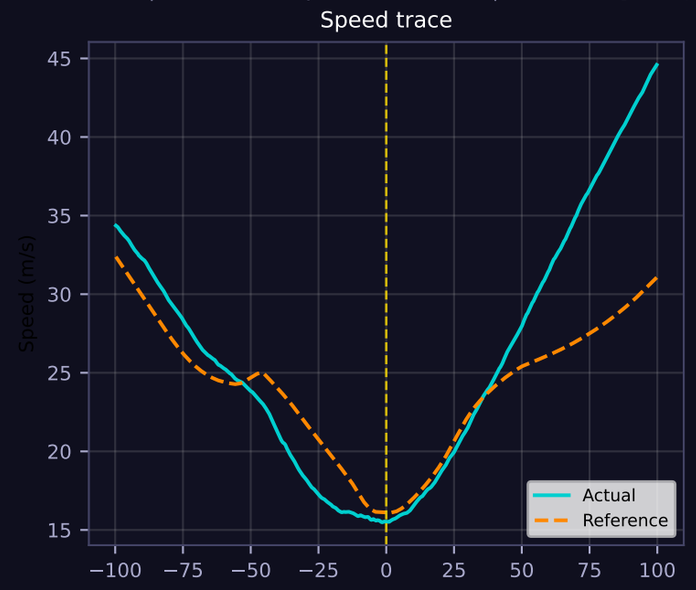
```
Entry speed:  107.8%
Apex speed:   95.9%
Exit speed:   115.8%

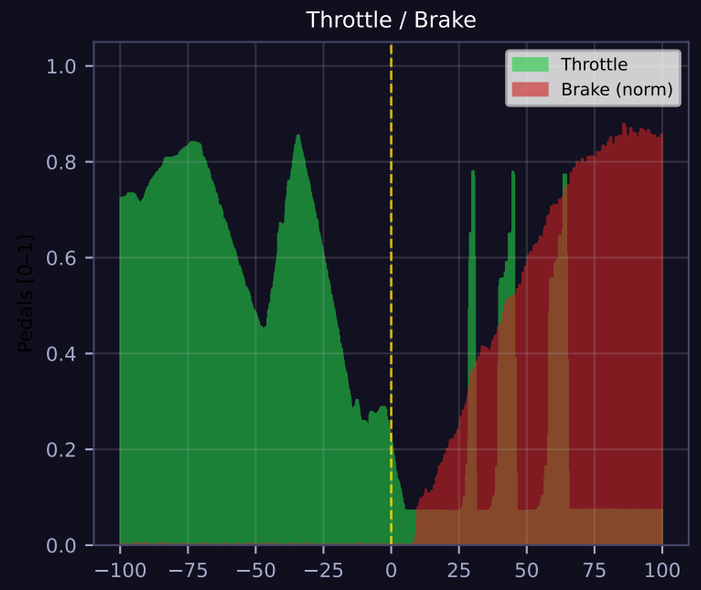
Apex lat dev: +0.68 m
Apex lag:     +29.8 m
Brake start:  -44 m from apex
Throttle app: +0 m from apex

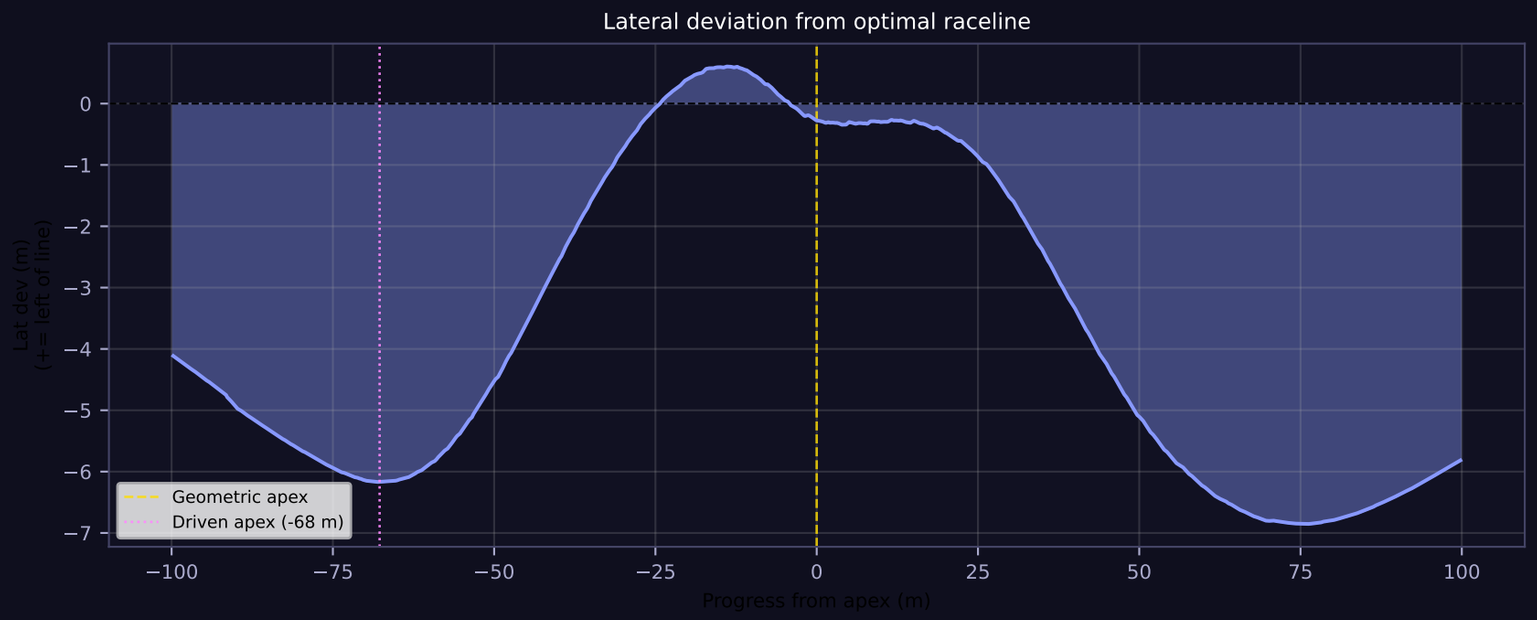
⚠ Issues detected:
  • Under-braking / hot entry
    Entry speed 108% of reference (+8%)
  • Late apex
    Driven apex 30 m past geometric apex
  • Early throttle
    Throttle applied before apex — risk of understeer on exit
```

C4 (R, R=21m, 16.1m/s)

Apex at s = 2320 m | Reference speed: 16.1 m/s | Window: [2220, 2420] m







Corner analysis

```
Entry speed:  94.0%
Apex speed:   95.4%
Exit speed:   105.3%

Apex lat dev: +0.02 m
Apex lag:     -67.8 m
Brake start:  +9 m from apex
Throttle app: +0 m from apex

⚠ Issues detected:
  • Early apex
    Driven apex 68 m before geometric apex
  • Early throttle
    Throttle applied before apex — risk of understeer on exit
```
